

Software: Enterprise Facility and Energy Management

Description

enteliWEB is a web-based application that connects all your facilities and centralizes building management operations, site engineering and energy analytics.

View your building your way by creating your own personal dashboards. Whether you are an executive, an energy manager or a building operator, the user experience in enteliWEB can be tailored to meet your exact needs.

- ▶ **Energy Analytics** inside of enteliWEB enables you to turn the existing data and sensors inside your building into virtual meters, and manage energy consumption down to the zone and equipment level. This software-based approach gives you a complete level of knowledge at a fraction of the cost of installing sub-meters.
- ▶ **Engineering Tools** in enteliWEB allow you to create, edit and save objects, modify system graphics and back up databases. Work on-site or connect remotely using the modern-looking front-end.
- ▶ **Centralize Facility Management** and make it easy to integrate scheduling, alarm management and operations. Connect to all of your buildings under a single login without having to network everything together. Track all building automation system (BAS) changes by service personnel, partner technicians and facility managers in enteliWEB.

enteliWEB[®]

enteliWEB Energy

enteliWEB Energy is an enterprise energy management package that makes it easy for anyone to understand the energy usage of their building.

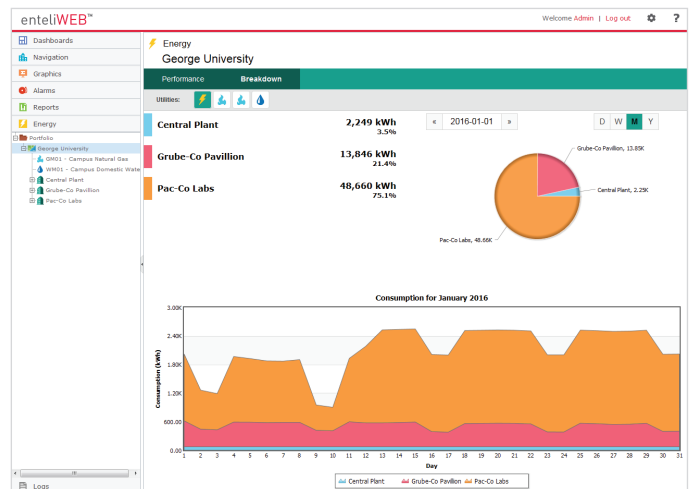

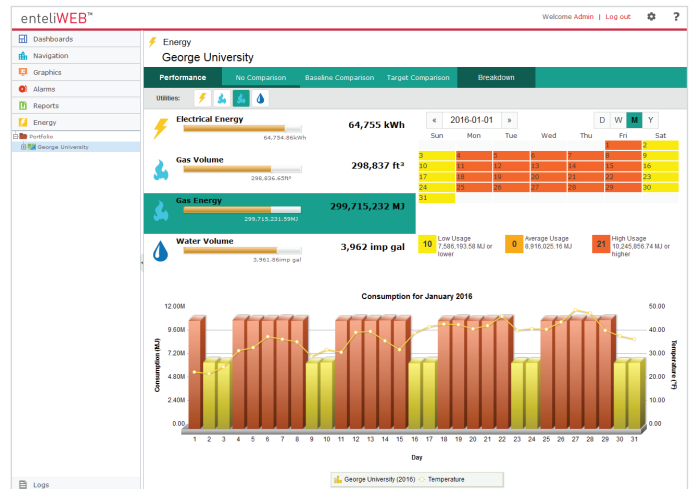

Leveraging the rich dashboard interface of enteliWEB, you have the tools to view your system's energy usage, set target energy goals and compare your energy usage against historical baselines.

► **Local or Cloud Applications.** enteliWEB Energy is the only energy analytics solution that scales from locally installed dashboards and reports to powerful cloud-based analytics.

► **Virtual Meters.** Find out exactly which building system is consuming too much energy without having to install costly wired meters. Virtual Meters utilize sensors and the data already gathered by the building automation system to track the energy consumption of every piece of equipment in your building, giving you unprecedented visibility into your consumption profile. You can also validate the calculated virtual meters with upstream utility meters.

► **Intuitive Dashboards.** These interactive dashboards allow you to analyze and breakdown usage to find energy savings. You can also create energy reports, and send and receive them by email.

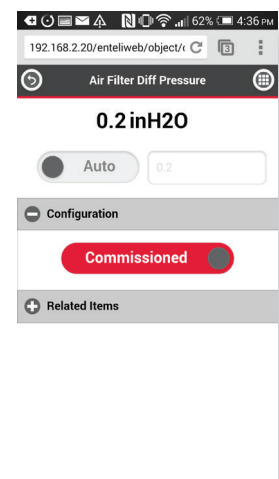

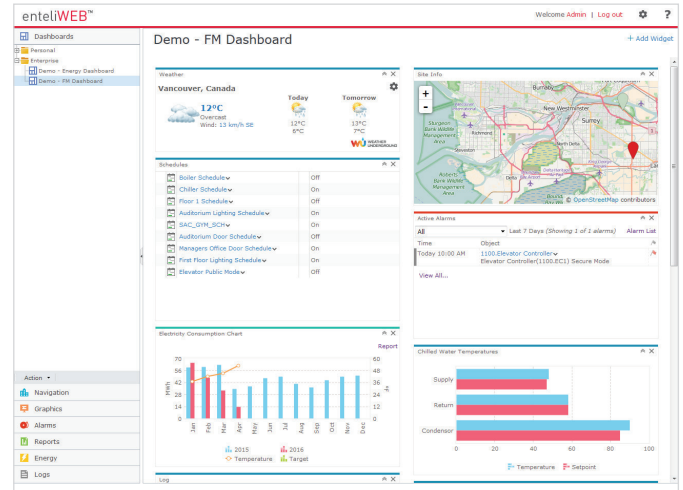

► **Alerts and Insights.** Simple alerts to analytics-based Insights warn you in advance of potential consumption overages. Both alerts and Insights are announced in enteliWEB and can also be set up for email notification.

Visualizing Your Building

enteliWEB makes your data more accessible by presenting information in a visually attractive and user-friendly way.

- ▶ **Enterprise Dashboards.** Provide high level information in simple graphical formats to help manage the facility's key performance indicators (KPIs).
- ▶ **Personal Dashboards.** Personal dashboards are an experience you create yourself. By mixing and matching widgets, each user gets their own personalized dashboard to keep an eye on things that matter.
- ▶ **System Dashboards.** Make operating a facility easy by aggregating system graphics, alarm management, energy information and more into a single dashboard screen.
- ▶ **Navigator.** Automatically scans the BACnet network and presents devices in a logically arranged network tree. BACnet objects can be monitored and commanded directly from Navigator, or opened from Navigator to change the configuration details.
- ▶ **enteliVIZ™ Graphics.** Create HTML5-based intelligent visualizations and equipment graphics in your web browser. Use them in dashboards alongside other widgets, or as full-page standalone graphics.
- ▶ **Mobile Friendly.** Dashboard and object pages are optimized for viewing on your smartphone or tablet. Whether you just want an overview, or you need to override a point, dashboard-driven navigation makes it easy to drill down from high-level views to specific BACnet objects. Finger-friendly buttons and large text mean you don't have to pinch-and-zoom to view content.
- ▶ **Multiple Language Display.** Support your stakeholders in the language that they are most comfortable using. enteliWEB's user-interface can be displayed in one of 22 world languages by selecting the language preference in each user account.
- ▶ **Building Automation Reports.** Gather information about your building by querying controllers on the network and displaying them in professional-looking reports. Reports can be converted to multiple file types, such as .pdf and .xlsx and emailed automatically on a schedule.

enteliWEB®

Centralizing Facility Management

enteliWEB provides you the tools to manage multiple sites more effectively.

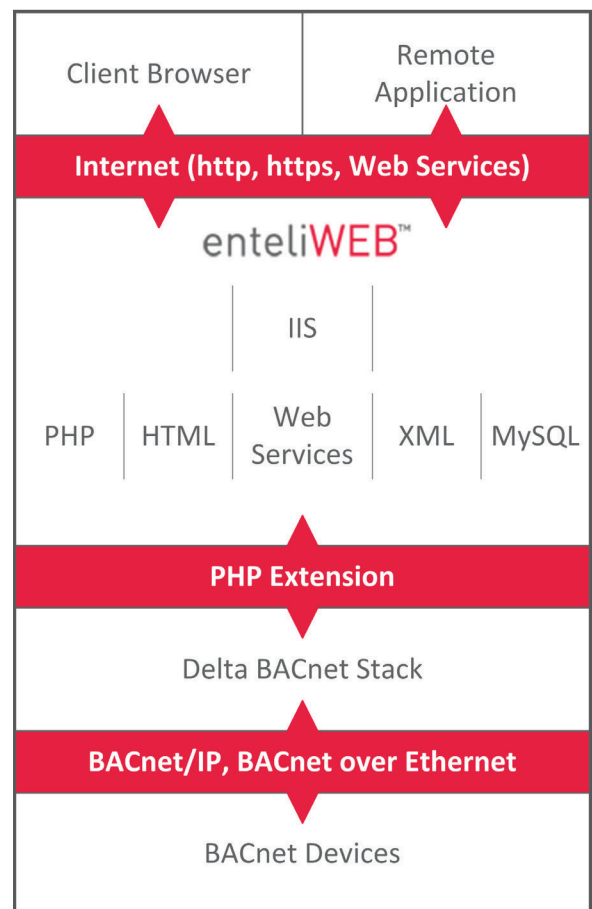

- ▶ **Single Login.** Manage multiple sites using a single login. No need to worry about duplicate addresses or networking everything together. All you need is an IP address for each site.
- ▶ **Retain Supervisory Control** of your entire portfolio of BACnet sites. Leave the other vendor's front end on-site while centralizing your alarm management, scheduling and energy analytics with enteliWEB.
- ▶ **Version Independent Software.** Allows organizations to operate an entire WAN without having to worry about maintaining different firmware versions in the hardware.
- ▶ **Restore and Backup.** Restore your entire BAS to an earlier state or quickly find a specific backup of a device. Schedule daily, weekly or monthly backups across devices on multiple sites.

Platform for Innovation

enteliWEB's suite of developmental tools allow you to create mobile apps, customize user interfaces and integrate third-party software.

- ▶ **API Documentation Available.** The enteliWEB application programming interface (API) is well-documented, so that you can easily create custom modules, widgets and interfaces to third-party software.
- ▶ **BACnet Web Services.** Allow remote applications, such as mobile apps or business systems to communicate with enteliWEB.
- ▶ **Alarm Module.** The alarm module allows alerts and alarms from non-BACnet systems to be annunciated and managed within enteliWEB.
- ▶ **Open Source Reporting Package.** Design custom reports in enteliWEB using an industry standard open source report package.
- ▶ **ODBC Driver.** Integrate the building automation system with business-level software.

enteliWEB®

Alarms

enteliWEB has a robust alarm management system that provides a detailed look at the issues and problems that come up on all your sites.

- ▶ **Comprehensive Alarm Management.** Includes intelligent visualizations, alarm assignments and operator comments on one screen. Powerful filtering, emailing and prioritization make enteliWEB alarm management effective even on your largest sites.
- ▶ **Alarm Widgets.** Can be added to any dashboard for a quick summary of specific data types. The maps widget uses pushpins on a map of your building locations to indicate the number and severity of alarms. The alarm list widget shows the active alarms for specific equipment and the widget can be added to system dashboards.

The screenshot shows the 'MainSite' dashboard with a list of active alarms. The list includes items like 'Room_Temperature' for various rooms, 'enteliBUS Controller 100', 'Auditorium Door Lock', 'Chilled Water Supply Temp', and 'AHU Filter Status'. Each alarm entry shows the object name, a brief description of the issue, and the time it occurred. A right-hand panel shows 'AHU Filter Status' details, including alarm flags and assignment options.

Audit Log

Audit logs provide the ability to track changes made to the system. The powerful filtering and timeline chart make it easy to find the information you're looking for, including manual changes to outputs, alarm history and any other changes made by the system's users.

The screenshot shows the 'Boiler' dashboard. It features a weather widget for Vancouver, Canada, a 'Natural Gas Consumption' chart showing usage over time, and a detailed schematic diagram of a boiler system with five boilers. Below the diagram is a log table with columns for Object, Action, From, To, and Timestamp, listing various system events.

User Permissions

- ▶ **User/Group Permissions.** Permissions give you the ability to assign roles and determine which BACnet objects and visualizations a user can see and interact with.
- ▶ **LDAP.** Integrate users from LDAP servers so that IT can control user access to enteliWEB.
- ▶ **Multi-Language Support.** Gives each user the option to select the language they want to use throughout enteliWEB.

The screenshot shows the 'Last 24h' audit log. It displays a table of events with columns for Object, Action, From, To, and Timestamp. The log includes entries for user logins (Admin), status changes for various equipment like 'Room 101 VAV' and 'Elevator Controller', and other system events. A right-hand panel shows details for a specific event, including log type, timestamp, object, and reference.

Software: Enterprise Energy Management

Ordering

enteliWEB is available in 200, 500, 2500, and Enterprise editions. All editions and add-ons include 1-year software maintenance subscription.

eWEB-200

Includes	200 I/O, Multiple Sites	
Select add-ons	eW200-EV	enteliVIZ Graphics
	eW200-KEE	Energy management
	eW200-VM	enteliWEB on an offline virtual machine
	eW200-API	Web services, mobile app, interface API and ODBC Driver

eWEB-500

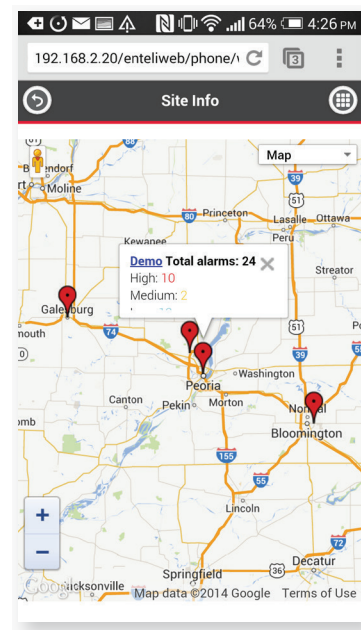

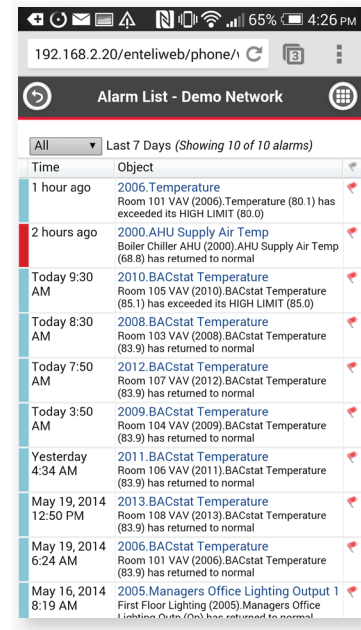

Includes	500 I/O, Multiple Sites	
Select add-ons	eW500-EV	enteliVIZ Graphics
	eW500-KEE	Energy management
	eW500-VM	enteliWEB on an offline virtual machine
	eW500-API	Web services, mobile app, interface API and ODBC Driver

eWEB-2500

Includes	2500 I/O, Multiple Sites	
Select add-ons	eW2500-EV	enteliVIZ Graphics
	eW2500-KEE	Energy management
	eW2500-VM	enteliWEB on an offline virtual machine
	eW2500-API	Web services, mobile app, interface API and ODBC Driver

eWEB-Ent

Includes	5000 I/O (expandable with AddOns), Multiple Sites	
Select add-ons	eWEnt-EV	enteliVIZ Graphics
	eWEnt-KEE	Energy management
	eWEnt-VM	enteliWEB on an offline virtual machine
	eWEnt-API	Web services, interface API and ODBC Driver
	eWEnt-2500IO	2,500 I/O point add-on
	eWEnt-25kIO	25,000 I/O point add-on
	eWEnt-UnLtd	Unlimited I/O point add-on

▶ 03-DIN

03-DIN-SRC

Description

The 03-DIN-SRC is a fully programmable native BACnet® building controller. As a primary integration engine of the 03 system, the 03-DIN-SRC contains memory storage and external communication ports, as well as the control logic for the expansion modules. The 03-DIN-SRC can support up to 4 expansion modules.

The 03-DIN-SRC supports multiple communication methods, including BACnet/IP, BACnet over Ethernet, BACnet MS/TP and Delta LINKnet.

Application

The 03 system is a complete solution that combines HVAC, access control and lighting control in a modular system. It combines multiple protocols and I/O points in one unit.

The 03 system improves room control, avoids duplicate devices and offers a satisfying occupant experience at a lower energy cost.

The 03-DIN-SRC single room controller is ideal for cost-sensitive applications where core features and single serial port connectivity are required.

Features

- ▶ Fully programmable
- ▶ BACnet/IP, BACnet over Ethernet and BACnet MS/TP communication ports
- ▶ Dual Ethernet ports
- ▶ Modular, expandable I/O. Modular design provides flexibility, ease of service and reduces cost of future upgrades.
- ▶ Fault detection and diagnostics
- ▶ Firmware upgrade and database load/save over the network
- ▶ LED indicators for device status, NET and Ethernet ports
- ▶ USB expansion ports
- ▶ DIN rail mountable (EN 50022-35x7.5)

03-DIN-8xP: 8 Universal I/O Module

Description

The 03-DIN-8xP is an I/O module for the 03-DIN system. Its 8 universal points can be configured to create the exact combination of inputs and/or outputs for a given application. When expansion is needed in the future, it's as easy as adding more modules to an existing system.

Application

The 03 system is a complete solution that combines HVAC, access control and lighting control in a modular system. It combines multiple protocols and I/O points in one unit.

The 03 system improves room control, avoids duplicate devices and offers a satisfying occupant experience at a lower energy cost.

Features

- ▶ 8 Universal points that can be configured as inputs or outputs
- ▶ Software configurable I/O
- ▶ Support for lighting applications with dimming
- ▶ DIN rail mountable (EN 50022-35x7.5)
- ▶ Modular design provides flexibility, ease of service and reduces cost of future upgrades and expansions.

Specifications

Universal Points

Up to 8 inputs (16 bit), supporting:
0-5 VDC
0-10 VDC
10 k Ω Thermistor
Dry Contact (using 10 k Ω Thermistor software setting)
4-20 mA (using external 250 Ω resistor on 0-5 V setting)

Up to 8 outputs (12 bit), supporting:
0-10 V @ 20 mA max (sourcing)
1-10 V @ 10 mA max (sinking)

Connectors

Removable screw-type terminal connectors

Wiring Class

Class 2 / SELV

▶ 03-DIN

03-DIN-PWRINJ: Power Injector

Description

The 03-DIN-PWRINJ power injector increases the number of 03-DIN modules on an 03 system by providing power to a maximum of 4 03-DIN I/O or gateway modules. These power injector expansions can be located up to 70 m (230 ft) away and still be directly controlled by the 03-DIN-CPU room controller.

Using power injectors, HVAC, access and lighting control can be centralized on single controller. The 03 system's modular nature also has the flexibility to grow to meet future needs of the site without additional wiring costs.

Application

The 03 system is a complete solution that combines HVAC, access control and lighting control in a modular system.

Features

- ▶ A series of power injector units adds up to 12 03-DIN modules to a single 03-DIN-CPU room controller
- ▶ Small footprint, DIN rail mounted
- ▶ Power injectors can be externally powered or powered by the 03-DIN-CPU controller
